DETAILED ACTION

Election/Restriction

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-24, drawn to a method for extracting a nucleic acid from a sample with a material comprising an ionizable group, said ionizable group binds nucleic acid at a lower pH (negatively charged) and releases the nucleic acid at a higher pH (positively charged), classified in class 436, subclass 177.
 - II. Claims 25-37, drawn to a solid phase product comprising a plurality of positively ionizable groups, classified in class 436, subclass 106.
 - III. Claims 38-41, drawn to a product with positive ionizable groups and negative ionizable groups, where the combined charge becomes more negative as the pH increases, classified in class 436, subclass 85.
 - 2. The inventions are distinct, each from the other because of the following reasons:

 Inventions of Groups II & III and I are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product, which is a buffer, can be used in a method of solubilizing and stabilizing biological solutions.

Application/Control Number: 09/736,632

Art Unit: 1636

- 3. Inventions of Groups II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, the compositions of the invention of Group II or Group III has separate uses such as buffers or diluents for biological solutions or reagents in methods of nucleic acid transfer or methods of protein isolation. See MPEP § 806.05(d).
- 4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
- 5. This application contains claims directed to the following patentably distinct species of the claimed invention: The individual members of the Markush Groups of claims 14 and 15 which are part of Group I. Also, for Group II, the members of the Markush Groups of claims 26, 34 and 35.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1-5, 7, 9, 10, 19 and 21-24 are generic to the species of Group I.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Application/Control Number: 09/736,632

Art Unit: 1636

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Conclusion

7. Certain papers related to this application are *welcomed* to be submitted to Art Unit 1636 by facsimile transmission. The FAX numbers are (703) 308-4242 and 305-3014. The faxing of such papers must conform with the notices published in the Official Gazette, 1156 OG 61 (November 16, 1993) and 1157 OG 94 (December 28, 1993) (see 37 CFR 1.6(d)). NOTE: If applicant *does* submit a paper by FAX, the original copy should be retained by the applicant or

Application/Control Number: 09/736,632

Art Unit: 1636

applicant's representative, and the FAX receipt from your FAX machine is proof of delivery. NO DUPLICATE COPIES SHOULD BE SUBMITTED, so as to avoid the processing of duplicate

papers in the Office.

Any inquiry concerning this communication or earlier communications should be directed

to Dr. William Sandals whose telephone number is (703) 305-1982. The examiner normally can

be reached Monday through Friday from 8:30 AM to 5:00 PM, EST. If attempts to reach the

examiner by telephone are unsuccessful, the examiner's supervisor, Remy Yucel can be reached

at (703) 305-1998.

Any inquiry of a general nature or relating to the status of this application should be

directed to the Zeta Adams, whose telephone number is (703) 305-3291.

William Sandals, Ph.D.
